**(54) AGENT FOR GENETICALLY DIAGNOSING
 AND/OR TREATING TUMOR USING
 TUMOR-SPECIFIC ANTIGEN AND NEW
 APPLICATION OF PROTON PUMP-INHIBITOR
 AS ANTITUMOR AGENT**

(57) Abstract:

PROBLEM TO BE SOLVED: To provide an antitumor agent as a new application of a pharmaceutical composition or a proton pump-inhibitor [V-ATPase inhibitor, H⁺/K⁺-ATPase inhibitor, V-ATPase uncoupler (containing H⁺/Cl⁻ symporter)] containing, as an active ingredient, tumor-specific antigen peptide, DNA and RNA encoding the peptide, antibody against the peptide,

recombinant vector containing the DNA or RNA and transformant containing the recombinant vector, DNA or RNA hybridizing to the DNA or RNA under a stringent condition (antisense DNA or antisense RNA), or leucocyte reacting with the peptide or binding with an antibody against the protein.

SOLUTION: A tumor-specific antigen peptide that contains at least an amino acid sequence constituting c⁺, c or a subunit of V-ATPase, and tumor-specifically expresses, an antibody against the peptide, and an agent for treatment or diagnosis using DNA or RNA encoding the peptide, as well as a new application of a proton pump-inhibitor as an antitumor agent are provided.

- Derwent Abstract: (**JP2001286284A2**) **Novelty** - A diagnostic agent/treating agent for tumors comprising:
(a) at least one protein (I) comprising:
(i) a fully defined sequence (S1) of 205, 155 or 831 amino acids as given in the specification;
(ii) an amino acid sequence in which at least one amino acid is deleted, replaced or added in (S1); or
(iii) a partial sequence of S1; or
(b) an antibody immunospecific for (I), is new.
ACTIVITY - Cytostatic.
MECHANISM OF ACTION - Proton pump inhibitor. No supporting data is given.
Use - The tumor-specific antigen peptide is useful for treating and preventing cancers.
